CNF Technologies Names Kent Doster as New Company President

SAN ANTONIO (1 August 2012) – **CNF Technologies Corporation**, a premier systems engineering company for the government, military, and corporate markets, announced today the hiring of Kent Doster as its new President. In this role, Kent will be responsible for running current operations and growing the business by identifying new business opportunities, as well as developing relationships with existing customers, other large and small businesses, and the academic communities for 2012.

"Kent is a proven executive with the ability to take CNF Technologies to the next level." stated Fred Ramirez, CNF's Founder and Chief Executive Officer. "We expect great things from Kent and anticipate his presence will continue and further the success of the company."

Prior to joining CNF, Doster was Director of SRC Inc.'s San Antonio operations. Previously, Doster was a Senior Information Assurance Engineer and Program Manager, providing Government customers with IA planning support. Over a course of 12 years, he was the driving force behind much of SRC San Antonio office's key contract wins.

Before joining SRC in 1999, Doster served as Trident Data System's Senior Business Development Manager, responsible for proposal development and account management. He help Trident grow from a small group of professionals to several hundred employees over an 8-year period. He served in the U.S. Air Force for over 20 years, where he earned an Air Force-sponsored degree in electrical engineering from the University of Texas.

Doster is a member of the Information Systems Security Association, Information Systems Auditing and Control Association, and the Armed Forces Communications Electronics Association. He is also a Certified Information System Security Professional and a Certified Information Security Manager.
