Air Force Selects CNF Technologies to Support Cyber Intelligence Operations

SAN ANTONIO 30 April 2016—CNF Technologies has been selected to support specialized cyber intelligence unit with the Air Force’s 25th intelligence, surveillance and reconnaissance (ISR) mission. The CNF team will provide ISR analysis and engineering expertise in response to multiple U.S. Air Force (USAF), National, and Joint cyberspace operational requirements. CNF will perform reverse engineering, malicious software analysis; generate cyber threat intelligence reports; and make intelligence-derived recommendations for the defense of the USAF and the Department of Defense (DoD) networks. The value of this 2-year contract is worth almost \$3 million.

About CNF Technologies

CNF Technologies (CNF) was incorporated in 2005 as a small disadvantaged business. Since inception, CNF has been providing the San Antonio cyber workforce with distinguished careers, professional development, and continuing education benefits. Fred Ramirez, Founder of CNF is dedicated to customer mission success, employee fulfillment, and giving back to the San Antonio community. CNF has a dedicated community outreach program with an established scholarship and internship program at a local university, a partnership and cyber camp with a local high school, and an annual donation drive to give to underprivileged children.

“At CNF, I believe our employees are our greatest strength and I take a personal interest and focus on ensuring their personal and professional growth and advancement. Without their expert knowledge, dedication and passion in everything they do, we would not be able to support our client's mission.”

– Fred Ramirez, Founder

The founders of CNF were pioneers in the cyber operations domain who were instrumental in the stand-up of the Air Force Computer Emergency Response Team (AFCERT) and the first Veterans Affairs Computer Incident Response Center (CIRC) and have more than century of combined experience in the Air Force, NSA and industry. CNF specializes in solving the most challenging problems in cyber security today, working in offensive and defensive technology development, malicious code analysis and exploitation, Defensive Cyber Operations (DCO) and support to Cyber Protection Teams that includes intrusion analysis/prevention, incident response, vulnerability management and eradication, cyber forensics, and training.
